

Puzzle Ring

EMPORIUM

6-Band Instructions for 6B, 6BWN, 6BWN-WB

<p>1. Hold Band stamped "1" (rounded outside band), with the irregular portion facing up, in your left hand.</p>	<p>2. Bring Band stamped "2" (other outside band) up against "1" band forming a diamond shape. Note – these are the outside bands when the ring is assembled.</p>	<p>3. Grasp band stamped "4" and metal type in your right hand with the stamp facing towards you, allowing "1" band and "2" band to fall down to one side. This band is one of the bands that cross over the ring on a diagonal when the ring is assembled.</p>	<p>4. Bring 2nd band stamped "4" up behind "4" band. The two bands should fit together and act as one.</p>	<p>5. Take the two bands stamped "3" and fit together. They also act as one band. Bring the two bands up together towards you with your left hand until the bands are almost against one another.</p>	<p>6. Holding two "3" bands between your thumb and forefinger, turn bands clockwise from the top.</p>	<p>7. Continue turning until you have completed a 180-degree rotation. The bands should fit together, locking the two outside bands ("1" and "2")</p>
<p>8. When the last step is completed, "3" and "4" bands should form an "x" when viewed from the top.</p>	<p>9. Take the first loose band on the same side which is "2" and rotate the band until the irregular shaped part is on the inside of the ring.</p>	<p>10. When you have completed the rotation, be sure that the "V" shaped part on the inside of the ring is over the remaining loose band. Bring band up and fit against "3" and "4".</p>	<p>11. Flip ring over and start rotating "1" until the irregular part of the band is on the inside.</p>	<p>12. When you have completed the rotation, bring "1" band up against the other three bands.</p>	<p>13. Congratulations, you have assembled your ring.</p>
