EMPORIUM

8-Band Instructions for 8BA, 8BAW, 8BWN, 8BWN-WB, 8WB, 8WB-D

1. Hold Band stamped "1" (rounded outside band) with the irregular portion up and in your left hand.

2. Bring Band stamped "2" (other outside band) up against "1" band forming a diamond shape. Note - these are the outside bands when the ring is assembled.

3. Bring up one more band from bottom on each side. These are bands "5" and "6". They will fit together with two bands remaining hanging underneath.

4. Grasp band stamped "4" and metal type in your right hand with the stamp facing towards you, allowing remaining four bands (1, 2, 5, and 6) to fall to one side. This band is the one that crosses over on a diagonal when the ring is assembled.

5. Bring 2nd band stamped "4" up behind 1st "4" band. The two bands should fit together and act as one. (NOTE: The 8WB-D has only one band stamped "4".)

6. Take two bands stamped "3" and fit together. They also act as one band. Bring the two bands up together towards you with your left hand until the bands are parallel.

7. Holding two "3" bands between your thumb and forefinger, turn bands clockwise.

8. Continue turning until you have completed a 180-degree rotation.

9. The bands should fit together, holding the two outside bands ("1" and "2")

10. When the step 9 is completed, "3" and "4" should form an "x".

11. Take the first band on the side which was facing you when you did step 7 and 8" which is "6" and rotate the band until the irregular shaped part is on the inside of the ring.

12. Bring band up and fit against "3" and "4". Be sure that the "v" shaped part is over the remaining loose bands.

EMPORIUM

8-Band Instructions for 81N, 8N, 8NX, 8T, 8TW4, 8WA, 8TWB (Cont.)

13. Bring band up and it will fit next to bands "3" and "4".

14. Turn ring around and start rotating "5" band until the irregular shaped part is on the inside of the ring.

15. When you have completed the rotation, bring "5" band up against the three other bands, again being sure that the "v" shaped part is over the remaining loose bands.

16. Bring band up so that it fits against "3", "4" and "6".

17. Turn ring around and start rotating "2" band until the irregular shaped part is on the inside of the ring.

18. When you have completed the rotation, be sure that the "v" is over the remaining band, "1". If you have a tight weave ring, you may want to leave this band loose, as the tight weave requires you to complete the next steps before it will fit into place.

19. Turn ring around and start rotating "1" band (remaining band) until the irregular shaped part is on the inside of the ring. Be sure that the v shaped part is under band "2".

20. The last two bands should fall into place. If you are having problems, be sure that you have the band with the "v" part of "2" and "1" in the correct order.

21. Congratulations, you have assembled your ring.
